A close-up photograph of a Medeco 4 key. The key is made of brass and has a complex, multi-bit design. The top of the key is engraved with "medeco" and "ASSA" in a stylized font, and "M4" is engraved on the side. The key is shown in a vertical orientation, with the bit at the top and the stem at the bottom.

MEDECO 4
High Security Key System

Building on more than 50 years of lock engineering innovation and offering the highest level of protection against physical attack and unauthorized key duplication, Medeco 4 (M4) cylinders are UL 437 Listed with solid brass construction and hardened-steel inserts to thwart drilling attacks. In addition to pins that lift and rotate, M4's design includes 4 side pins: 3 finger pins and 1 lift pin, providing a high level of pick resistance. The patent-pending M4 key design with its movable element helps protect against the emerging threat of 3D printing for unparalleled credential security.
